

How to operate your Klitron eLock from a remote location?

Easy!

All you need is an android phone (connected to the mains) which will be sited at the remote location running the Klitron app, set up with its own klitron user account.

This is how to set it up...

A. Administrator's device

1. Sign-in to the cloud.
2. Go to **Doors** and select the one that is to be operated remotely. You must be the Administrator of the selected lock.
3. Add as a new user the account of the remote device. (The lock will now appear in the Doors listing of the remote smartphone)
4. Select **Cloud Settings**
 - a. Activate the **Receive remote commands** slider.
 - b. Enter the User account of the remote smartphone and press **OK**.

Enabling users to send remote comands

- a. Go to **Users** and select a user.
 - b. Activate the slider **Send remote command**.
- (you may repeat the above procedure to as many users as you wish)

B. Remote smartphone setup

1. Sign-in to the cloud .
2. Goto **Settings** and activate the **Receive remote commands** slider.
3. Kill the app and run it again to enable the new setting

That's all...

Now you can unlock your remotely installed Klitron by selecting **Send Remote Command** from the lock's menu
